Sam George
Genesis Global Ltd

29 March 2012

Dear Sam

Assistance with bringing the GEM-TECH product to the UK market

Further to our recent conversation regarding the GEM-TECH material, a lightweight replacement concrete product, I can confirm that BRE are well-placed to assist your organisation in helping to bring such a product to the UK market.

BRE understands the product to consist of sand, cement, water and discrete air-cells, and that the constituents are mixed using your own GEM-TECH machine which utilises a patented screw thread to mix and blend the product for consistency and uniformity. It is also understood that a programme of testing will be commenced shortly to investigate the properties of the material. Clearly the results of these tests will be pivotal in gauging the product's likely performance in any given application, and therefore essential to defining the optimal path to market.

The costs and timeframes associated with BRE assisting Genesis Global Ltd to bring the product to market cannot be finalised at this stage. The details and scope of these aspects will need to be discussed and agreed prior to work commencing. It is likely that for certain markets specific tests will need to be undertaken and appropriate levels of performance confirmed.

I trust this is sufficient information for you at the present time, but if you need anything further please don't hesitate to contact me.

Yours sincerely

Dr Martyn Webb
